

SHUBAIB

Aspiring AI Engineer | Generative & Agentic AI

Pakistan | shubaibcreative@gmail.com | +92 305 2375850 | linkedin.com/in/shubaib-uddin | github.com/shubaib-uddin

PROFESSIONAL SUMMARY

Passionate aspiring AI Engineer focused on building intelligent, production-ready systems in the Generative and Agentic AI space. Skilled in designing RAG pipelines, multi-agent orchestration with LangGraph, workflow automation with n8n, and AI-powered mobile/web applications. Self-driven builder with a portfolio of real-world projects and a strong focus on becoming a full-stack AI Engineer.

TECHNICAL SKILLS

- AI & LLM Frameworks: LangChain, LangGraph, LangSmith, RAG, Corrective RAG, MCP, Agentic AI, Generative AI, Gemini AI
- Retrieval & Databases: ChromaDB, FAISS, PostgreSQL
- Languages & Tools: Python, Kotlin, Pydantic, Streamlit, n8n, Git, GitHub, HTML, CSS, JavaScript
- Automation & Integrations: OpenAI API, WhatsApp API, Google Sheets Integration, REST APIs, real-time processing

SELECTED PROJECTS

AI Essay Evaluator — Android App | Gemini AI • Android • Kotlin • Mobile Development

- Built an Android application that delivers instant, structured essay feedback using Gemini AI.
- Evaluates essays across Language Quality, Critical Thinking, Clarity, and Structure.
- Generates overall score, letter grade, detailed feedback, word validation, essay history, and a clean dark UI.

AI Restaurant Assistant | OpenAI • n8n • WhatsApp API • Google Sheets • AI Automation

- Built a conversational ordering assistant that handles customer requests naturally.
- Checks live inventory, processes orders, calculates totals, and updates data automatically.
- Uses WhatsApp API for chat ordering, Google Sheets as backend, and n8n for workflow automation.

AI-Powered Essay Evaluator | LangGraph • Streamlit • Ollama • Groq • Pydantic

- Built a parallel multi-agent LangGraph pipeline where independent evaluators review essays simultaneously.
- Final model aggregates outputs into one comprehensive assessment with scoring and detailed feedback.
- Designed a responsive Streamlit UI with real-time word counting and smooth evaluation workflow.

Agentic AI Blog Writing System | LangGraph • Tavily Search • Ollama • Streamlit

- Created a fully autonomous system that researches topics, plans blog structure, and generates content in parallel.
- Pipeline includes Router, Research, Planner, Workers, and Reducer for modular orchestration.
- Supports Markdown export and blog history for repeatable content creation.

AI-Powered Expense Manager | MCP • Streamlit • Python • Local LLM

- Built an intelligent expense chatbot that records spending through natural language.

- Auto-logs transactions in Pakistani Rupees, retrieves past records, and provides category-wise summaries.
- Uses Model Context Protocol and a local LLM for privacy, efficiency, and responsiveness.

AI Chat Application | [LangGraph](#) • [LangChain](#) • [Streamlit](#)

- Developed a sleek AI chat application with real-time LLM responses and persistent conversation memory.
- Focused on a minimal, fast Streamlit interface with LangGraph-powered state management.

Real-Time News Web App | [Python](#) • [Streamlit](#) • [NewsAPI](#) • [PIL](#)

- Built a lightweight web app that fetches and displays live news via NewsAPI.
- Practiced real-time API integration, session state management, and image processing with PIL.

Smart ATM Simulation System | [JavaScript](#) • [HTML](#) • [CSS](#) • [LocalStorage](#)

- Created a browser-based ATM simulator with PIN setup, deposit and withdrawal, balance updates, and transaction history.
- Runs entirely in the browser using LocalStorage, with no backend required.

AREAS OF FOCUS

- Generative AI: RAG pipelines, Corrective RAG, MCP, retrieval accuracy
- Agentic AI: Multi-agent orchestration, LangGraph state machines, autonomous reasoning and planning
- Mobile AI: Android development with Gemini AI integration and structured feedback systems
- Workflow Automation: n8n automation pipelines, API integrations, real-time data processing
- UI/App Development: Streamlit dashboards, Android apps, and interactive AI-powered interfaces

EDUCATION

Secondary School (9th Grade) | Madrasa (Islamic Studies) — Currently Enrolled

Note: Core AI/ML and Android development skills are self-taught through hands-on project building and independent study.

Open to opportunities, collaborations, and interesting AI projects.
