

SHUBAIB

Aspiring AI Engineer | Generative & Agentic AI

 shubaibcreative@gmail.com |  +92 305 2375850 |  Pakistan |  linkedin.com/in/shubaib-uddin |  github.com/shubaib-uddin

PROFESSIONAL SUMMARY

Passionate aspiring AI Engineer focused on building intelligent, production-ready systems in the Generative and Agentic AI space. Proficient in designing RAG pipelines, multi-agent orchestration using LangGraph, and workflow automation with n8n. Self-driven builder with a portfolio of real-world AI projects — currently advancing toward a full-stack AI Engineering role.

TECHNICAL SKILLS

AI & LLM Frameworks: LangChain · LangGraph · LangSmith · RAG · Corrective RAG · MCP · Agentic Workflows · Generative AI

Vector Databases: ChromaDB · FAISS · PostgreSQL

Languages & Tools: Python · Pydantic · Streamlit · n8n · Git & GitHub

PROJECTS

AI-Powered Essay Evaluator | LangGraph · Streamlit · Ollama · Groq · Pydantic

- ▶ Built a parallel multi-agent LangGraph pipeline where independent AI evaluators analyze essays simultaneously across language quality, critical thinking, clarity, and structure.
- ▶ Final AI model aggregates all agent outputs into a single comprehensive assessment with scoring and detailed feedback.
- ▶ Designed a responsive Streamlit UI with real-time word counting, evaluation dashboard, and smooth multi-agent workflow experience.

Agentic AI Blog Writing System | LangGraph · Ollama · Tavily Search · Streamlit

- ▶ Built a fully autonomous multi-agent blogging system capable of researching, planning, and generating complete technical blog posts automatically.
- ▶ Pipeline: Router → Research (Tavily Search) → Planner → Parallel Workers → Reducer; supports Markdown export and blog history.
- ▶ Deepened understanding of agentic workflows, parallel execution, and research pipelines using LangGraph orchestration.

AI-Powered Expense Manager | MCP · Streamlit · Python · Local LLM

- ▶ Built an intelligent expense management chatbot allowing natural language expense entry, auto-logging in Pakistani Rupees, and category-wise summaries.
- ▶ Integrated Model Context Protocol (MCP) with a local LLM to ensure privacy, efficiency, and real-time responsiveness.

AI Chat Application | LangGraph · LangChain · Streamlit

- ▶ Developed a sleek AI chat application featuring real-time LLM responses and persistent conversation memory for a smooth user experience.
- ▶ Focused on a clean, minimal, fast Streamlit UI with LangGraph-powered state management.

Real-Time News Web App | Python · Streamlit · NewsAPI · Requests · PIL

- ▶ Built a lightweight web application fetching and displaying live news via NewsAPI with a clean, modern Streamlit UI.
- ▶ Practiced real-time API integration, session state management, and image processing with PIL.

Registration Form (Python Tkinter) | Python · Tkinter · JSON

- ▶ Developed a GUI registration form with input validation, error handling via message boxes, and local data persistence using JSON.

- ▶ Strengthened understanding of GUI development, validation logic, and basic data storage in Python.

EDUCATION

Secondary School (9th Grade)

Madrasa (Islamic Studies) · Currently Enrolled

Note: Core AI/ML skills are entirely self-taught through hands-on project building and independent study.

AREAS OF FOCUS

- ▶ Generative AI: RAG pipelines, Corrective RAG, Model Context Protocol (MCP), retrieval accuracy
- ▶ Agentic AI: Multi-agent orchestration, LangGraph state machines, autonomous reasoning & planning
- ▶ Workflow Automation: n8n automation pipelines, API integrations, real-time data processing
- ▶ UI/App Development: Streamlit dashboards, interactive AI-powered interfaces
